

## **Interop 2011: All New Netreo OmniCenter® Version 7.0**

### **Enhanced User Interface layout delivers greater flexibility, navigability, and consolidated views into all key Enterprise IT metrics**

**Interop 2011, Las Vegas, NV – May 9, 2011** – Netreo, industry leading developer of cost-effective and easy-to-deploy IT dashboard solutions, today introduced version 7.0 of its flagship OmniCenter product. This new major revision incorporates an entirely new AJAX-based UI that delivers dynamic graphing and improved usability. It includes Active Directory and LDAP integration, improved event correlation and incident management, a new real-time Network Operations Center (NOC) dashboard, as well as seamless integration with Virtualization Visualizer, Netreo's virtualization management product. Also new with 7.0 is a Virtual Appliance (VA) option. The announcement was made today at the 2011 Interop Las Vegas Business Technology Conference and Expo.

"We understand the challenges that IT organizations face in their efforts to increase transparency into key IT resources such as web, mail, cloud-based services, virtualization, IP telephony, and the network. Version 7.0 enables our customers to more effectively face these challenges," says Kevin Kinsey, CEO.

Prime Healthcare Services along with Prime Healthcare Services Foundation a California-based hospital system with 14 locations and over 9,000 employees, has used OmniCenter to manage their network for years. "To be able to cost-effectively view and manage all IT elements without adding an array of expensive enterprise software products, hardware, and manpower is a huge win for us", says Sreekant Gotti, CIO of Prime Healthcare.

OmniCenter has historically utilized a minimal-footprint architecture that is free of probes, distributed hardware and databases, client software, or agents. OmniCenter 7.0 expands upon this theme with a new, zero-footprint downloadable Virtual Appliance (VA) option that enables seamless rollouts, scalability, and redundancy options.
